The sequence encodes a human G-protein coupled receptor (GPCR), hRUP27. The endogenous and non-endogenous, constitutively activated versions of human G-protein coupled receptors (GPCR), are useful for direct identification of candidate compounds as receptor agonists, inverse agonists or partial agonists having applicability as therapeutic agents for treating diseases related to GPCR, e.g. lung cancer. Non-endogenous version of human GPCRs are also utilized in research settings and in vitro and in vivo system; incorporating GPCRs can be utilised to elucidate and understand the roles these receptors play in the human condition, both normal and diseased
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Endogenous and non-endogenous versions of human G-protein coupled receptors for direct identification of candidate compounds as agonists, inverse agonists or partial agonists for use as therapeutic agents.

The invention describes a method of screening for compounds or their salts that can change affinity of melanin-concentrating hormone (MCH) with its G protein-coupled orphan receptor protein, SLT. The screened MCH receptor agonists are useful as appetite-stimulating agents and its antagonist for preventing or treating obesity e.g. malignant mastocystosis, exogenous obesity and hyperinsulinar obesity, and also for treating sexual function disorders, overpowering intermittent pains, still borns, uterus rupture, premature birth and Prader-Willi syndrome. This sequence encodes the G protein-coupled orphan receptor protein, SLT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        120

Human TGR342 27-AUG-2002

```
The invention relates to a G-protein coupled receptor polypeptide (GPCR), termed TGR, and its associated nucleic acid. The sequences of the invention are useful for identifying a compound that modulates signal transduction and for identifying a mammal having a TGR-associated is transduction and for identifying a mammal having a TGR-associated is transduction and for identifying a mammal having a TGR-associated is transduction and for identifying a mammal having a TGR-associated and include in diagnosis and transductions, hyperprolactinations such a renal failure, nephritis, the protection is proported, growth disorders, diabetes insipidus, hyperprolactinaemia and disturbances of thirst, sheep, temperature regulation, appetite, blood pressure or any other syndrome or disease associated with the hypothalamus. The sequences can be used in regulation of mutations associated with diseases resulting for the identification in particular cell types and for identification of modulators of GPCR signal transduction. This sequence represents cDNA cooling the human TGR342 polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     .

The invention relates to a melanin concentrating hormone type I receptor (WCHIR) deficient mouse whose genome comprises an alteration in one or both MCHIR alleles, where the alteration substantially reduces expression of a functional MCHIR. The invention also relates to a method of measuring the affect of a compound on a MCHIR deficient mouse and measuring one or more phenotypes associated with MCHIR activity e.g. hyperphagic activity, body weight, locomotor activity. The methods and composition of the present invention are useful for screening of compounds that are further used as a research tool and for treating weight loss or weight gain, reducing pain, stress, anxiety, and treating weight loss or weight gain, reducing pain, stress, anxiety, and treating worder. Several dysfunction, diabetes, locomotor deficits, fatigue or sleep disorders. The present sequence is human melanin concentrating hormone type 2 receptor (MCH2R) CDNA used in a method of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 MCHIR deficient mouse with an alteration in one or both alleles, useful for screening of compounds as a research tool and for achieving useful effects for locomotor activity, stress, anxiety, fatigue, circadian
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             121 ATTGGGATTATCTGTTCAACAGGGCTGGTTGGCAACATCCTCATTGTATTCACTATAATA

The invention relates to truncated melanin-concentrating hormone (MCH) analogue peptide active at melanin-concentrating hormone-2 receptor (MCH-2R), or its labelled derivative or salt, useful for increasing weight or appetite in a subject. The peptide is useful for screening for a compound able to bind MCH-2R. It is useful for increasing weight or appetite in a subject having an MCH-2R. It is useful for measuring the ability of a compound to decrease weight or appetite in a subject having MCH-2R. It is useful for measuring the ability of a screen for MCH agonists, to explore differences between MCH-1R and MCH-2R. The present sequence is human MCH-2R CDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             TCCTTATCCTGGCATTGCCTGTCTGGGTCTACTCGAAGGTCATCAAATTTAAAGACGGT 540

This invention relates to novel truncated human melanin-concentrating receptor (MCH-1R). MCH has been localised to the meuronal cell bodies of the hypothalamus which are implicated in the control of food intake, including perikarya of the lateral hypothalamus and zona inertia. The primary mode of action of MCH is to promote feeding (orexigenic). The peptides of the invention, MCH-1R agonists, may have anti-HIV, anabolic or immunomoulator activities. The peptides may be useful for increasing weight/appetite in a subject having an MCH-IR. They may also be useful for measuring the ability of a compound to decrease weight/appetite in a subject having an MCH-IR. They may also be useful a subject having an MCH-IR. They may also be useful a subject having an MCH-IR. They may also be useful a subject having an MCH-IR. They may also be useful and the periods.
                                                                                                                                                                                                                                                                                                                                                                                                      subject to produce weight appetite increase, administering the compound, and measuring the change in weight or appetite of the subject. The peptides may therefore be useful for treating disorders accompanied by weight loss including anorexia, AIDS, wasting, cachexia and frail elderly diseases. The invention offers the advantages of ease of synthesis and/or increased solubility in physiological buffers. The present sequence is the DNA sequence encoding the human melanin-concentrating hormone (hMCH) type 2 receptor (MCH-2R) against which the peptides of the invention are specifically not targeted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Grecacaradriggaargeerriricirarreacearggeeceaaggggaggggggggggg 300
                                                                             New optionally substituted truncated human melanin-concentrating hormone (hMCH) peptides are hMCH-1 agonists, useful for increasing appetite/weight.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              121 ATTGGGATTATCTGTTCAACAGGGCTGGTTGGCAACATCCTCATTGTATTAATA

The invention relates to human G protein-coupled receptor (GPCR), HGPRRMY9 and its nucleic acid sequence. The invention is useful for preventing, treating, or ameliorating a medical condition related to the brain, lung, colon, testes, neural, gastrointestinal, pulmonary, or reproductive system. Detecting mutations in HGPRBMY9 bib actermining the level of expression of HGPRBMY9 is useful in diagnosing disease. HGPRBMY9 nucleic acid, polypeptide and agents that control the level of expression or activity of HGPRBMY9 may be useful in treating conditions such as cancer, Alzheimer's disease, asthma, and diabetes. The present sequence is human HGPRBMY9 cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       61 AATAAAGAGTTTGCTTATCAAACTGCCAGTGTGGTAGATACAGTCATCCTCCCTTCCATG

The invention describes a method of screening for compounds or their salts that can change affinity of melanin-concentrating hormome (MCH) with its G protein-coupled orphan receptor protein, SLT. The screened MCH receptor agonists are useful as appetite-stimulating agents and its antagonist for preventing or treating obesity e.g. malignant mastocystosis, exceptones obesity and hyperinsulinar obesity, and also for treating sexual function disorders, overpowering intermittent pains, still borns, uterus rupture, premature birth and prader-willi syndrome. This sequence encodes the G protein-coupled orphan receptor protein, SLT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ô

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      657
Sequences AAS42806-AAS42926 represent cDNA molecules and PCR primers for CDNA molecules encoding human G-protein coupled receptor (GPCR) polypeptides. The protein and DNA sequences of the invention can be used to identify compounds which bind to GPCR polypeptides and in screening for compounds that modulate GPCR activity. By screening a human subject for the presence of mutations in GPCR DNA, a GPCR-related disorder or a genetic predisposition can be diagnosed. The sequences can also be used for treatment and prevention of mental disorders such as schizophrenia, attention deficit disorder, anxiety, depression, dementia and bipolar disorder, neurological disorders such as Huntington's disease, Parkinson's disease and Tourette's syndrome, metabolic disorders such as thrombosis, myocardial infarction, cardiovascular disorders such as viral infections caused by HIV and cancers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             297

Huntington's disease or Gilles de la Tourette's syndrome. AXOR21 polymucleotides and polypeptides are also useful for screening and structure based designing of antagonists, agonists and inhibitors of AXOR1. AXOR21 polymucleotides are useful for chromosome localisation studies, as diagnostic reagents for defecting mutetions in associated genes, and as valuable tools for tissue expression studies. AXOR21 polymucleotides and polypeptides are useful as vaccines

The invention relates to novel seven transmembrane domain receptors, designated 6549 or 58875. The 65499 and 58875 polypeptides can be expensed by standard recombinant methodology. The polypeptides can be expected to standard recombinant methodology. The polypeptides, encoding polymucleotides and modulators are useful for controlling G protein coupled receptor-related disorders, and as a novel diagnostic target and therapeutic agent in treatment and diagnosis of 65499 or 58875 mediated the related disorders such as callular proliferative and differentiative disorders (including cancer e.g., carcinoma, sarcoma), bone metabolism disorders (e.g., osteoporosis, rickets,), haematopoietic disorders (such as chronic myelogenous leukemia, acute promyeloid leukemia,), cardiovascular disorders (e.g., isohaemic heart disease, myozardial infarction, etc), endotholial cell disorder (e.g., portiasis, Grave's disease,), hormonal disorders (e.g., multiple sclerosis, Parkinson's immune disorders (including autoimmune diseases such as rheumatoid

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to novel seven transmembrane domain receptors, designated 65499 or 58875. The 65499 and 58875 polypeptides can be expressed by standard recombinant methodology. The polypeptides, encoding polymucleotides and modulators are useful for controlling G protein coupled receptor-related disorders, and as a novel diagnostic target and therapeutic agent in treatment and diagnosis of 65499 or 58875 mediated or related disorders such as cellular proliferative and differentiative disorders (including cancer e.g., carcinoma, sarcoma), bone metabolism disorders (e.g., osteoporosis, rickts), haematopoietic disorders (such as chronic myelogenous leukemia, acute promyeloid leukemia,), cardiovascular disorders (e.g., ischaemic heart disease, myocardial infarction, etc). endothelal cell disorder (e.g., psoriasis, Garve's disease,), hormonal disorders (diabetes mellitus, hyperthyroidism,),

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 840
immune disorders (including autoimmune diseases such as rheumatoid arthritis, osteoarthritis), liver disorders, viral diseases such as heparocellular cancer, pain disorders (e.g., pain associated with surgery or chest pain,), metabolic, disorders (e.g., pain associated with surgery or chest pain,), metabolic, disorders (obesity, cachexia,). The 65499 or 88875 molecules are useful as surrogate markers, as pharmacodyanamic markers and as pharmacogenomic markers. The present sequence represents a DNA encoding the human 58875 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         900

NEDO human CDNA sequencing project supported by Ministry of

Economy, Trade and Industry of Japan; CDNA full insert sequencing:

Research Association for Biotechnology (RAB); CDNA library

construction: Helix Research Institute (HRI) (supported by Japan

Key Technology Center etc.); 5'- & 3'-end one pass sequencing: RAB,

HRI, and Biotechnology Center, National Institute of Technology and

Evaluation; clone selection for full insert sequencing: HRI and

RAB; annotation: HRI and RAB.
